

NEXUS EOC

Simulated Emergency Operations Platform

AI-powered, scenario-based incident command training for emergency managers, EOC teams, and response organizations. Make decisions, face consequences, and receive a full after-action review — without waiting for the next real event.

WHAT IT IS

NEXUS EOC is a web-based emergency management training simulator that places the user in the role of senior emergency manager during an active incident. The AI engine generates a unique, geographically accurate scenario based on the selected incident type and jurisdiction, then evaluates every decision the player makes against real-world NIMS, ICS, and FEMA doctrine. No two runs are identical.

KEY FEATURES

10 Scenario Types	Hurricane, MCI, HazMat, Cyber, Earthquake, Flood, Wildfire, Winter Storm, RDD, Train Derailment
6 Jurisdiction Types	Rural County, Mid-Size City, Large Urban Metro, Coastal Community, Tribal Nation, Interstate Corridor
5 Difficulty Levels	Basic through Brutal, plus Adaptive mode that scales to demonstrated competence
Dynamic World Generation	AI generates a specific named location, accurate map pins, and opening conditions tailored to the selected jurisdiction
Live Incident Map	Leaflet-based map with color-coded infrastructure pins and AI-generated event pins each turn
Community Lifelines	Real-time FEMA 8-lifeline status tracking with AI-generated reasoning per turn
Field Dispatch Feed	Incoming reports from the field, updated each turn to reflect incident progression
Media Feed	AI-generated fictional headlines reflecting public perception of the incident
ESF Reference Panel	All 15 Emergency Support Functions with lead agencies — click to track activation
Reference Links	Curated doctrine, guidance documents, and AARs relevant to the active scenario
After-Action Review	Full AI-generated AAR on ENDEX covering command continuity, resource effectiveness, doctrine gaps, and recommendations

WHO IT IS FOR

NEXUS EOC is designed for emergency management professionals at all levels who need realistic, doctrine-grounded decision-making practice between real exercises and incidents. Ideal for:

- County and municipal emergency managers
- EOC staff and section chiefs

- Hospital incident command teams
- Business continuity and resilience professionals
- EM degree programs and certification candidates (CEM, CBCP, FEMA MEP)
- State and federal agency preparedness staff

THE DIFFERENCE

Traditional tabletop exercises require a facilitator, a room, and hours of coordination to run a single scenario. NEXUS EOC runs on demand, adapts to any jurisdiction and difficulty level, and delivers an objective AI after-action review the moment the player types ENDEX. It is not a replacement for full-scale exercises — it is the daily training repetition that makes those exercises more effective.
