

NEXUS EOC

Simulated Emergency Operations Platform

AI-powered, scenario-based incident command training for emergency managers, EOC teams, and response organizations. Train in your role, face realistic consequences, and receive a full after-action review — on demand, without a facilitator.

WHAT IT IS

NEXUS EOC is a web-based emergency management training simulator that places the user in a specific EOC role during an active incident. The AI engine generates a unique, geographically accurate scenario based on the selected incident type and jurisdiction, then evaluates every decision against real-world NIMS, ICS, ESF, and FEMA doctrine. Role-based simulation ensures that an ESF-8 Public Health Liaison Officer trains from a fundamentally different perspective than an Operations Section Chief. No two sessions are identical.

KEY FEATURES

Feature	Description
10 Scenario Types	Hurricane, MCI, HazMat, Cyber, Earthquake, Flood, Wildfire, Winter Storm, RDD, Train Derailment
6 Jurisdiction Types	Rural County, Mid-Size City, Large Urban Metro, Coastal Community, Tribal Nation, Interstate Corridor — each with distinct resources, legal authorities, and constraints
5 Difficulty Levels	Basic through Brutal, plus Adaptive mode that calibrates to demonstrated competence
Role-Based Simulation	23 roles including EOC Director, all 4 Section Chiefs, PIO, Safety Officer, Liaison Officer, and all 15 ESF Liaison Officers — AI calibrates evaluation and AAR to the selected role
Dynamic World Generation	AI generates a specific named location, accurate map pins, local agency names, and opening conditions unique to each scenario-jurisdiction combination
Feature	Description
Live Incident Map	Leaflet-based map with color-coded infrastructure pins at launch and AI-generated event pins each turn
Community Lifelines	Real-time FEMA 8-lifeline status tracking with AI-generated reasoning per turn
Field Dispatch Feed	Incoming reports from the field updated each turn using named local agencies and local geography
Media Feed	AI-generated fictional headlines from local outlets reflecting public perception of the incident
ESF Reference Panel	All 15 ESFs with lead agencies — click to track activation during your session
Reference Links	Curated doctrine, guidance, and AARs for each scenario type including FEMA Resilience Hub and Geospatial Resource Center
After-Action Review	Full AI-generated AAR on ENDEX — calibrated to your role, jurisdiction, and actual decisions — no scripted templates

WHO IT IS FOR

NEXUS EOC is designed for emergency management professionals who need realistic, doctrine-grounded decision-making practice between real exercises and incidents:

- County and municipal emergency managers
- EOC staff — section chiefs, ESF liaison officers, PIO, safety officer
- Hospital incident command teams
- Business continuity and resilience professionals
- EM degree programs and FEMA MEP candidates
- State and federal agency preparedness staff
- National Guard EM and civil support personnel

THE DIFFERENCE

Traditional tabletop exercises require a facilitator, a room, and hours of coordination. NEXUS EOC runs on demand, adapts to any jurisdiction, role, and difficulty level, and delivers an objective AI after-action review the moment you type ENDEX. Every ESF liaison officer can train from their specific seat, with role-calibrated complications and doctrine-grounded feedback, without waiting for the next scheduled exercise.
