

Emergency operations training for individuals and teams that responds to your decisions.

NEXUS EOC is a simulated emergency operations platform that gives emergency managers, EOCs, response partners, and students realistic decision-making reps before the real incident happens.

AI-driven scenarios • consequence-based play • solo + team exercises • real jurisdictions + custom scenarios • AAR + transcript outputs

FILTER

All

Hurricane Landfall
Coastal hurricane impacts with evacuation, sheltering, emergency services, and resource prioritization pressures.
NATURAL HAZARD

Mass Casualty Incident
High-casualty incident requiring rapid coordination across EMS, hospitals, law enforcement, and public information.
DISASTER

Hazardous Materials Release
Hazardous incident with protective actions, public warning, environmental monitoring, and multi-agency coordination.
HAZMAT

Cyber-Infrastructure Cascade
Cyber disruption affecting water, power, communications, emergency services, and continuity of operations.
INFRASTRUCTURE

Major Earthquake
Seismic event with damage assessment, debris, communications, medical surge capacity, structural risk.
NATURAL HAZARD

Flash Flood / Dam Failure
Rapid flooding with downstream warning, evacuations, sheltering, access constraints, and infrastructure risk.
NATURAL HAZARD

Urban Wildfire
Wild down fire with evacuation routes, shelter options, air resource coordination, and structure exposure risk.
NATURAL HAZARD

Winter Storm Cascade
Extreme winter impacts with power outages, road warning, debris, fuel, and vulnerable populations.
NATURAL HAZARD

Radiological Dispersal Device
EOC event requiring consequence management, public messaging, incident coordination, and contamination controls.
SECURITY / CBRN

Train Derailment - MCI / HazMat
Rail incident combining casualties, hazardous materials, evacuation decisions, and railroad coordination.
DISASTER / HAZMAT

Build Custom Scenario
Create a guided EOC exercise using your own real-world location, event, and training focus.
CUSTOM SCENARIO

ACTIVE EOC EXERCISE — LIVE PLAY

SCENARIO
Radiological Dispersal Device

POSITION / FUNCTION
EOC Director

JURISDICTION
Shiprock, New Mexico (Navajo Nation)

FLASH CARDS

NEW — 09:47 MST
BA Law Enforcement: Initial perimeter established. Shiprock town center area (32°48'N 109°10'W) is currently unsecured. On the west approach, one (1) unsecured personnel.

NEW — 09:47 MST
Shiprock Area PD: Three (3) unsecured personnel requesting decontamination guidance and have no access to standing radiological product.

NEW — 09:47 MST
Navajo Nation Emergency Management: Tribal Coordinator contact has been notified, ending on formal confirmation from the Nation's emergency management director.

NEW — 09:47 MST
NM State Emergency Management Duty Officer: State liaison supervisor (Battalion) Guard units, to formal. Assume Navajo Nation Emergency Management Director role from the Nation.

RADIOLOGICAL DISPERSAL DEVICE — Shiprock, New Mexico (Navajo Nation) — Adaptive — EOC DIRECTOR

A radiological dispersal device detonated this morning in a public area of Shiprock, New Mexico, within the Navajo Nation, triggering activation of the Tribal Emergency Management EOC under coverage jurisdiction with federal coordination requirements that span BIA, HHS, EPA, FEMA, and New Mexico state agencies. The contamination boundary has not been characterized, community members are self-evacuating and self-referring to the HHS facility without decontamination, and public messaging in One District has not yet been released. Multiple federal and state entities are seeking coordination entry points simultaneously while the geographic isolation of the region, limited local radiological assets, and the complexity of trust and jurisdiction create compounding gaps across public health, access management, and intergovernmental authority.

I am activating the EOC coordination structure and directing all section leads to confirm their current priorities, resource gaps, and external coordination requirements. We will establish a common operating picture, verify protective action information with public health and radiological authorities, and ensure inter-agency releases are coordinated message. Operations will identify immediate life-safety needs while Planning begins a consolidated situation update for the next coordination cycle.

09:47 MST
Good — that's a solid foundation for standing up coordination. Section leads are checking in, and Operations is already running down the initial life-safety picture from field command. Here's where we are right now: a device detonated approximately 45 minutes ago near the intersection of US-64 and the Shiprock town center area. Local fire and BIA law enforcement established an initial perimeter, but the hot zone boundary is still not confirmed — the on-scene meeting from the BIA officer's assessor is inconsistent with the estimate from the first fire crew in Planning is pulling that discrepancy together now.

HOW IT WORKS

WHAT MAKES NEXUS EOC DIFFERENT

AI-DRIVEN EXERCISE ENGINE

Scenarios are powered by AI, so each run can unfold differently based on the user's decisions and the evolving incident picture.

SOLO AND TEAM EXERCISE MODES

Users can train individually or in shared team rooms that support role-based play, coordination, and synchronized exercise progression.

CONSEQUENCES BASED ON DECISIONS

The platform reacts to what users actually say and do — affecting priorities, resource requests, coordination gaps, and communication choices.

REAL JURISDICTIONS AND CUSTOM SCENARIOS

Exercises can be adapted to real locations or built around user-defined events, conditions, and training objectives.

SHARED TEAM COORDINATION

Team rooms support host controls, shared turns, coordination chat, private messages, and a common operational picture for all players.

TEAM AND INDIVIDUAL AFTER-ACTION REVIEWS

At ENDEX, users receive a branded AAR and transcript, including shared team feedback and role-specific performance insights.
