

NEXUS EOC
SIMULATED EMERGENCY OPERATIONS PLATFORM

nexuseoc.com

also available at nexuseoc.ai

Emergency operations training that responds to your decisions.

NEXUS EOC is a simulated emergency operations platform that gives emergency managers, EOCs, response partners, and students realistic decision-making reps before the real incident happens.

AI-driven scenarios

consequence-based play

not multiple choice

AAR + transcript outputs

Hurricane Landfall

Coastal hurricane impacts with evacuation, sheltering, infrastructure, and resource-prioritization pressures.

Mass Casualty Incident

High-casualty incident requiring rapid coordination across EMS, hospitals, law enforcement, and public information.

Hazardous Materials Release

HazMat incident with protective actions, public warning, environmental monitoring, and multiagency coordination.

Cyber-Infrastructure Cascade

Cyber disruption affecting water, power, communications, public services, and continuity of operations.

Major Earthquake

Seismic event with damage assessment gaps, degraded communications, medical surge, and resource staging challenges.

Flash Flood / Dam Failure

Rapid flooding with downstream warning, evacuations, sheltering, access constraints, and infrastructure risk.

Urban Wildfire

Wind-driven fire with evacuation routes, shelter options, air resource coordination, and structure exposure risk.

Winter Storm Cascade

Extreme winter impacts with power outages, road clearance, warming shelters, fuel, and vulnerable populations.

Radiological Dispersal Device

RDD event requiring consequence management, public messaging, federal coordination, and contamination controls.

Train Derailment — MCI / HazMat

Rail incident combining casualties, hazardous materials, evacuation decisions, and railroad coordination.

How it works

1

Select

Choose a scenario and objective.

2

Configure

Set role, jurisdiction, difficulty.

3

Respond

Submit EOC-style decisions.

4

Review

Download AAR and transcript.

What makes NEXUS EOC different

AI-POWERED EXERCISE ENGINE

Scenarios are powered by AI, so each run can unfold differently based on the user's decisions and the evolving incident picture.

CONSEQUENCES BASED ON INPUT

The platform reacts to what the user actually says - priorities, resource requests, coordination gaps, and communication choices.

INTERACTIVE, NOT A QUIZ

This is not a click-the-right-answer program. Users must think, write, coordinate, and justify actions under pressure.

PROFESSIONAL TAKEAWAYS

At ENDEX, users receive a branded AAR and transcript that support coaching, classroom review, and improvement planning.
